

WorldLight Introduces New Meta-Search Engine

HALMSTAD, SWEDEN - March 25, 2004 - WorldLight today introduced a new meta-search engine, WindSeek, at www.windseek.com.

On the heels of announcing a new search technology at Entireweb.com, WorldLight.com AB is now pleased to introduce a new meta-search technology at WindSeek.com.

This new lightning fast, easy-to-use meta-search engine is our next step to become a full-size provider of online search tools. With a highly scalable meta-search engine technology, friendly interface and reliable search results, WindSeek.com is one of the strongest challengers to more recognized meta-search engines on the web today.

WindSeek.com pulls results from many of the major search engines simultaneously with lightning speed and accuracy. Meta-Search engines, like WindSeek.com, are dependent upon the content of the databases they query. Having good, reliable sources is therefore very important to the success of meta-search. By querying multiple sources, meta-search engines present searchers with a more complete representation of what's available on the World Wide Web.

"The success of the development of WindSeek.com has been very important for us. We believe that WindSeek.com can give the major meta-search engines some worries and hopefully the users can find their way to WindSeek.com as well," says WorldLight.com AB's CEO, Marcus Andersson.

Currently WindSeek.com is in beta-test mode and will improve continuously during the next weeks when more features will be added.

About WindSeek

WindSeek.com is a brand new lightning fast meta-search engine using a highly advanced technology designed for maximum performance and relevant results. WindSeek.com's focus is to be a strong competitor in the meta-search engine market with an easy-to-use and high performance meta-search engine.

More information about WindSeek can be found at <http://www.windseek.com>.

About WorldLight.com AB

WorldLight.com AB is a fast growing search software provider. The technology improves continuously, making Entireweb.com and WindSeek.com popular search engines among Web users. In November of 2001, WorldLight.com AB bought the majority of the contents in Euroseek AB since they had to leave in due to financial problems. Along with the deal, WorldLight.com AB became the owner of a search technology and has continued to develop the technology. Headquartered in Halmstad, Sweden, WorldLight.com AB is a fully Swedish-owned and operating company.
